

Configuring another machine as target host using its public IP:

1) Login to the machine (Ansible server/lab machine) from where ansible commands are to be run.

1.1 Either login to the terminal on Graphical Desktop on the lab using Lab Public IP, Username and password.

1.2 OR Copy the credentials from LMS Portal, lab details page and connect via any 3rd party CLI tools on your local laptop (Command Prompt/Power Shell/git bash/mobaxterm/putty/virtual machine etc.).

```
C:\Users\Saurabh.negi>ssh labuser@13.234.76.208
The authenticity of host '13.234.76.208 (13.234.76.208)' can't be established.
ED25519 key fingerprint is SHA256:uE3Xmj1+zqqBGyB3IiZVeLt2rWWTWX03GtCp3gFTxzA.
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added '13.234.76.208' (ED25519) to the list of known hosts.
labuser@13.234.76.208's password: Enter your lab password here
Welcome to Ubuntu 22.04.4 LTS (GNU/Linux 6.5.0-1017-aws aarch64)
```

2) Now we should be inside our lab machine and we can run our commands for practice.

Note : You might need to repeat all these steps as lab environment might reset after some time and all these changes might be lost.
